*S. Corbin*

## Work Experience

| | |
|---|---|
| since 11/2022 | **Frontend Web Developer** |
| | ISCOPE GmbH, Osnabrück, Germany |

*As a frontend specialist, I am responsible for planning and developing web applications, administrative interfaces, and websites. I make decisions regarding the tech stack for new projects and focus on modern, reliable technologies like React, Next.js, TailwindCSS, and TypeScript.*

*With my years of experience, I also take on senior-level responsibilities, including driving the company's technological advancements, DevOps, mentoring trainees, and serving as a point of contact for technical questions. Additionally, I'm the Tech Lead for several projects.*

*I also maintain several legacy projects based on TYPO3, jQuery, and Bootstrap.*

| | |
|---|---|
| 03/2017 – 12/2021 | **Managing Partner** |
| | Corbin & Grundke GbR, Osnabrück, Germany |

*During my time as a freelancer, I grew a lot in both web development and media design. I worked on a wide range of projects, which gave me the chance to dive into lots of different technologies and tools.*

*Frameworks like Vue, Nuxt, and Tailwind were my entry point into modern web development. Together with my colleague, who handled backend development with Laravel, we worked on a bunch of exciting projects, ranging from custom-made and blazingly fast business websites to interactive web apps with clean and modern UIs.*

| | |
|---|---|
| 05/2015 – 02/2016 | **Digital Media Designer** |
| | Elbracht Montage GmbH, Herzebrock-Clarholz, Germany |

*As the sole media designer, I was responsible for maintaining the company's website, creating to-scale bathroom drawings with 3D visualization, and designing advertising materials, promotional items, and forms.*

| | |
|---|---|
| 08/2010 – 05/2013 | **Apprenticeship for Digital Media Design** |
| | BrillDesign GmbH, Herzebrock-Clarholz, Germany |

*During my apprenticeship as a media designer at a full-service advertising agency, I got the chance to work on a wide variety of projects and pick up a lot of new skills along the way. The mix of tasks helped me build experience in both print and digital design and gave me solid, all-around training.*

*In print, I worked on designing marketing materials, business stationery, and ads, but I also got to be creative with things like logo design and developing corporate identities.*

*In web development, I finally got to turn my hobby into a job. I built on my basic knowledge of HTML, CSS, and JavaScript by getting real-world experience in a professional setting. I worked on developing websites with TYPO3, created templates, and configured TYPO3 using TypoScript.*
